CAPSTONE ALPHA TESTING FEEDBACK FORM

FurniCraft: An AI-Based Furniture Recommendation System for Lance Furniture Shop

[ ] PASSED [ ] CONDITIONAL PASSED [ ] RE-ALPHA
Target: at least 50% of listed features complete and working, or the designated main feature complete and working. Panel verifies during live demonstration.
Panel outcome is unselected until the live review is conducted and recorded.

Project details

Project title	Entry
Project title	FurniCraft: An AI-Based Furniture Recommendation System for Lance Furniture Shop
Team members	Cayabyab, Ashley Anne D. - Capstone developer Camo, Stepanie Joy C. - Capstone developer Emplica, Mark Emmanuel M. - Capstone developer Veloza, Kristine L. - Capstone developer Vergara, Shirkhan Saske T. - Capstone developer
Alpha testing date	To be set for the panel session

1 Project overview and objectives

Lance Furniture Shop customers may find it difficult to compare furniture by budget, dimensions, style, wood, and finish, while the shop must manage product and reservation information. FurniCraft is a web-based system for customers and the shop administrator/owner. It supports furniture browsing, preference-based recommendations, room photo analysis and 2D visualization, chatbot assistance, and reservation requests, with administrative tools for products, customers, reservations, and reports. The project aims to help customers make informed selections and evaluate system usability with intended users.

2 Scope and delimitations

Scope follows the supplied manuscript and workflows present in the project source. The system is developed for Lance Furniture Shop and its catalog.

Scope - what the system covers	Delimitations - boundaries and exclusions
Web access for customer and administrator/owner; account and profile; catalog browsing/search; preferences; recommendations; favorites and feedback; room photo analysis and 2D visualization; furniture chatbot; reservations and status; admin product, customer, reservation management; business reports.	No online payment, delivery tracking, inventory or financial management, or mobile application. Recommendations use Lance Furniture Shop products and depend on customer/catalog data. Chat depends on Gemini configuration. Room analysis depends on image quality and configured services. Visualization is 2D without 3D, 360-degree rotation, or AR. This form does not claim a panel test, SUS result, deployment, or full cross-browser acceptance.

3 User roles

The manuscript and application define two roles.

Role	Main actions or permissions
Customer	Register/verify/sign in; manage profile; browse/search furniture; save favorites; set preferences; view recommendations and feedback; use optional chatbot; manage own room images; submit/track reservations; cancel eligible requests.
Administrator/Owner	Access dashboard; manage products and customers; review/update reservations; view reports and recommendation, usability, and privacy review pages.

4 Complete feature list

Team status is from source-code review, not a witnessed live demonstration. Panel status is pending for all rows. Personalized recommendations are the one designated main feature.

No	Main?	Feature and expected outcome	Role	Team status	Panel status
1	Y	Personalized furniture recommendations from customer preferences and catalog	Customer	Complete	Pending
2	N	Register, verify email, sign in, recover password, manage profile	Customer	Complete	Pending
3	N	Browse/search catalog, product details, budget filtering	Customer	Complete	Pending
4	N	Set furniture type, style, wood, varnish, budget preferences	Customer	Complete	Pending
5	N	Save favorites and provide recommendation feedback	Customer	Complete	Pending
6	N	Ask furniture questions in chatbot	Customer	Partial - external Gemini dependency	Pending
7	N	Upload room image with consent and view analysis	Customer	Partial - service and image quality dependent	Pending
8	N	View furniture in 2D room visualization	Customer	Partial - 2D; v2 disabled by default	Pending
9	N	Submit, track, or cancel eligible reservation	Customer	Complete	Pending
10	N	Create/edit/activate/deactivate/remove catalog products	Administrator/Owner	Complete	Pending
11	N	View and manage customer records	Administrator/Owner	Complete	Pending
12	N	Review reservations and update workflow status	Administrator/Owner	Complete	Pending
13	N	View/export reports and evaluation/privacy pages	Administrator/Owner	Complete	Pending

50% route met: [ ] Yes [ ] No Main feature verified complete: [ ] Yes [ ] No

Minimum alpha target met by either route: [ ] Yes [ ] No. Panel decision pending.

Feedback and recommendations

Panel feedback: To be completed after the live demonstration.

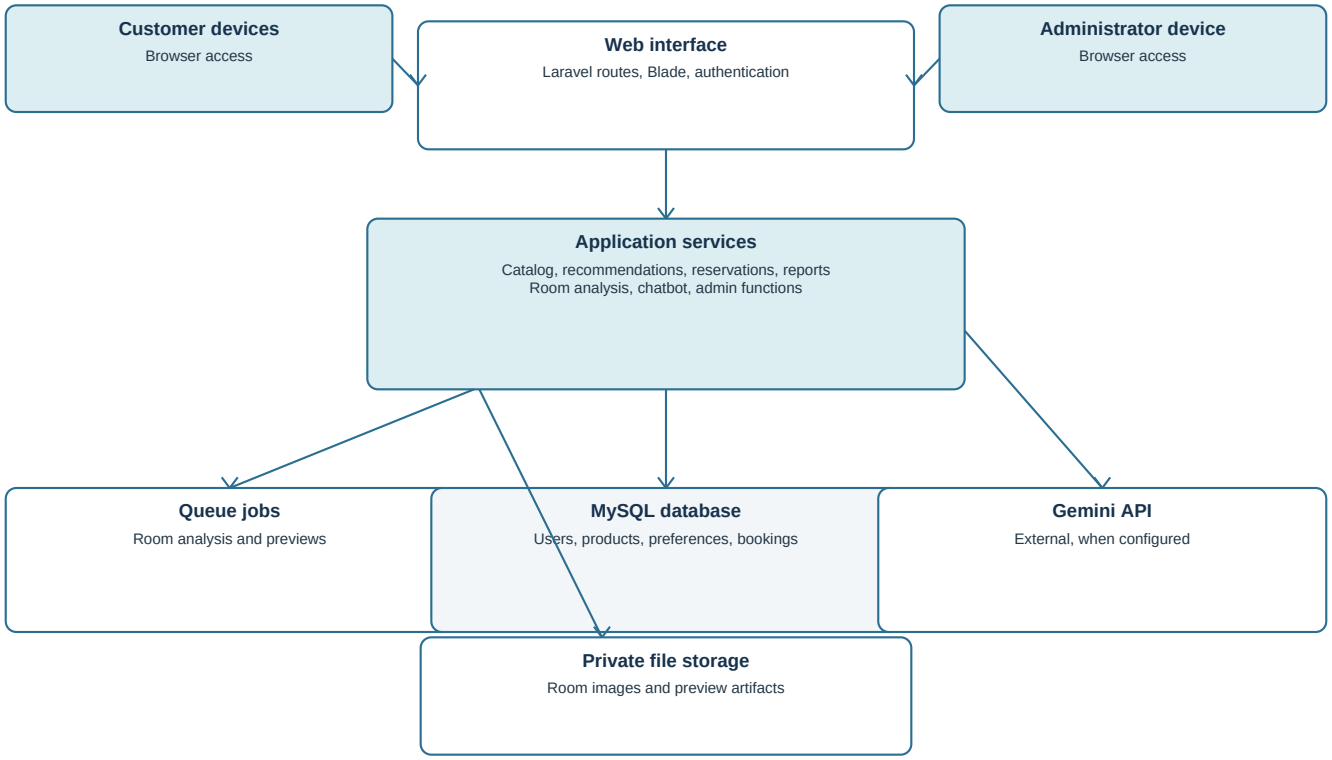
Reason for re-alpha: To be completed by panel if needed.

Conditions or re-alpha focus: To be completed by panel.

Panelist signature: _____ Date: _____

5 High level system architecture

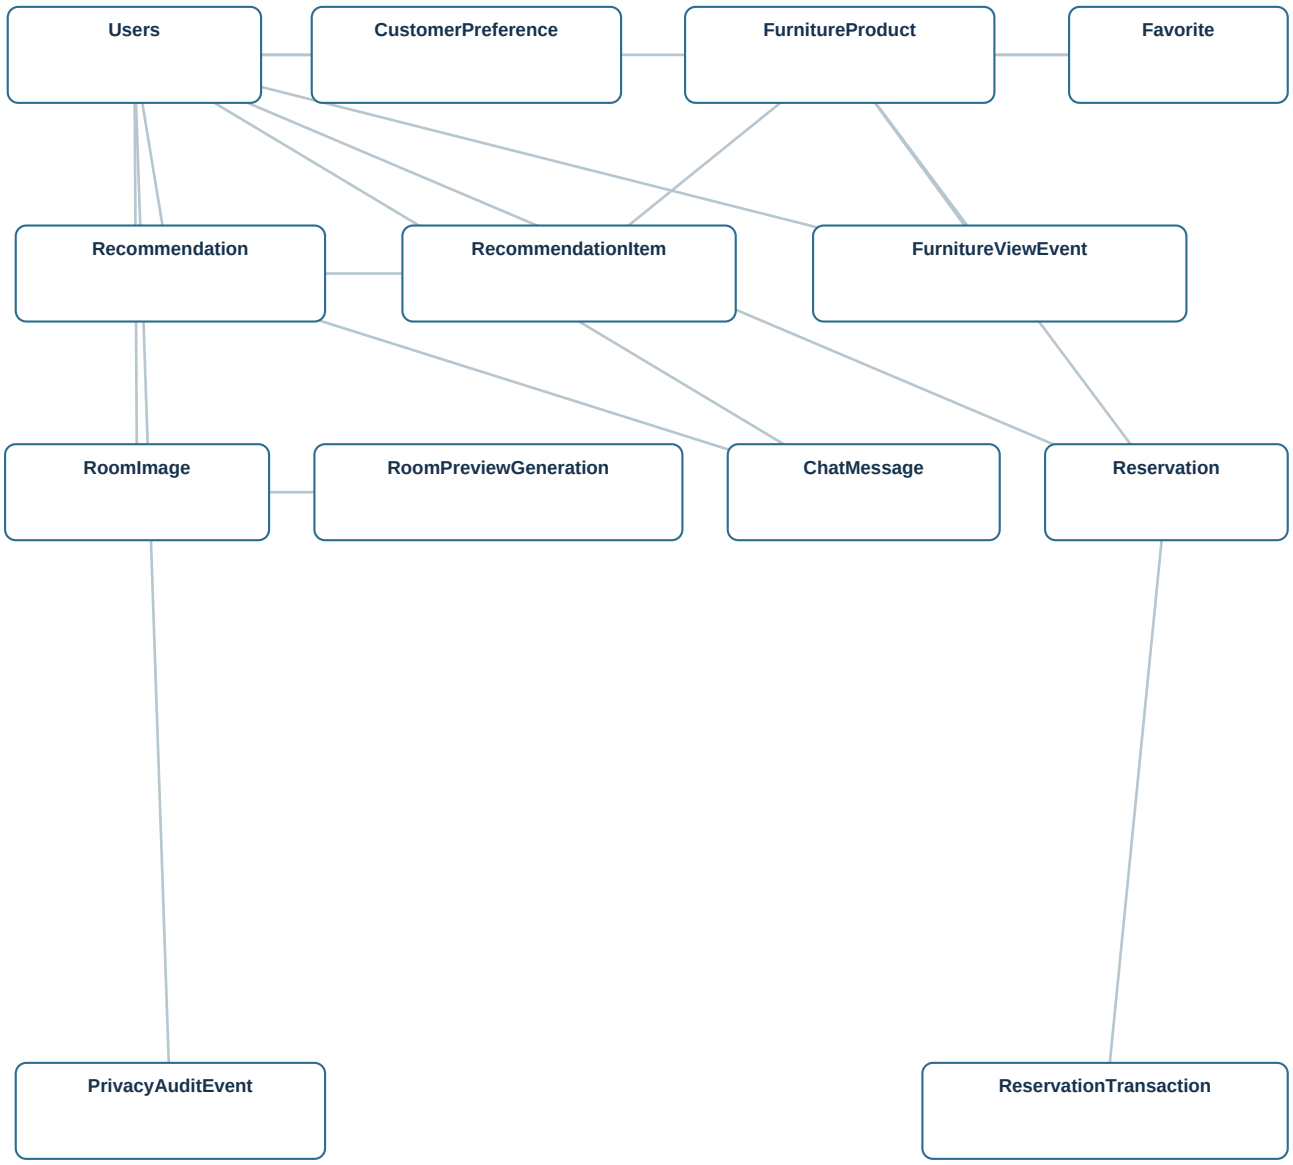
Logical view based on source; external services and workers depend on deployment settings.



Logical architecture based on source; actual hosting and service availability depend on configuration.

6 Database entity diagram

Application model names and main relationships; attributes and cardinalities omitted as requested.

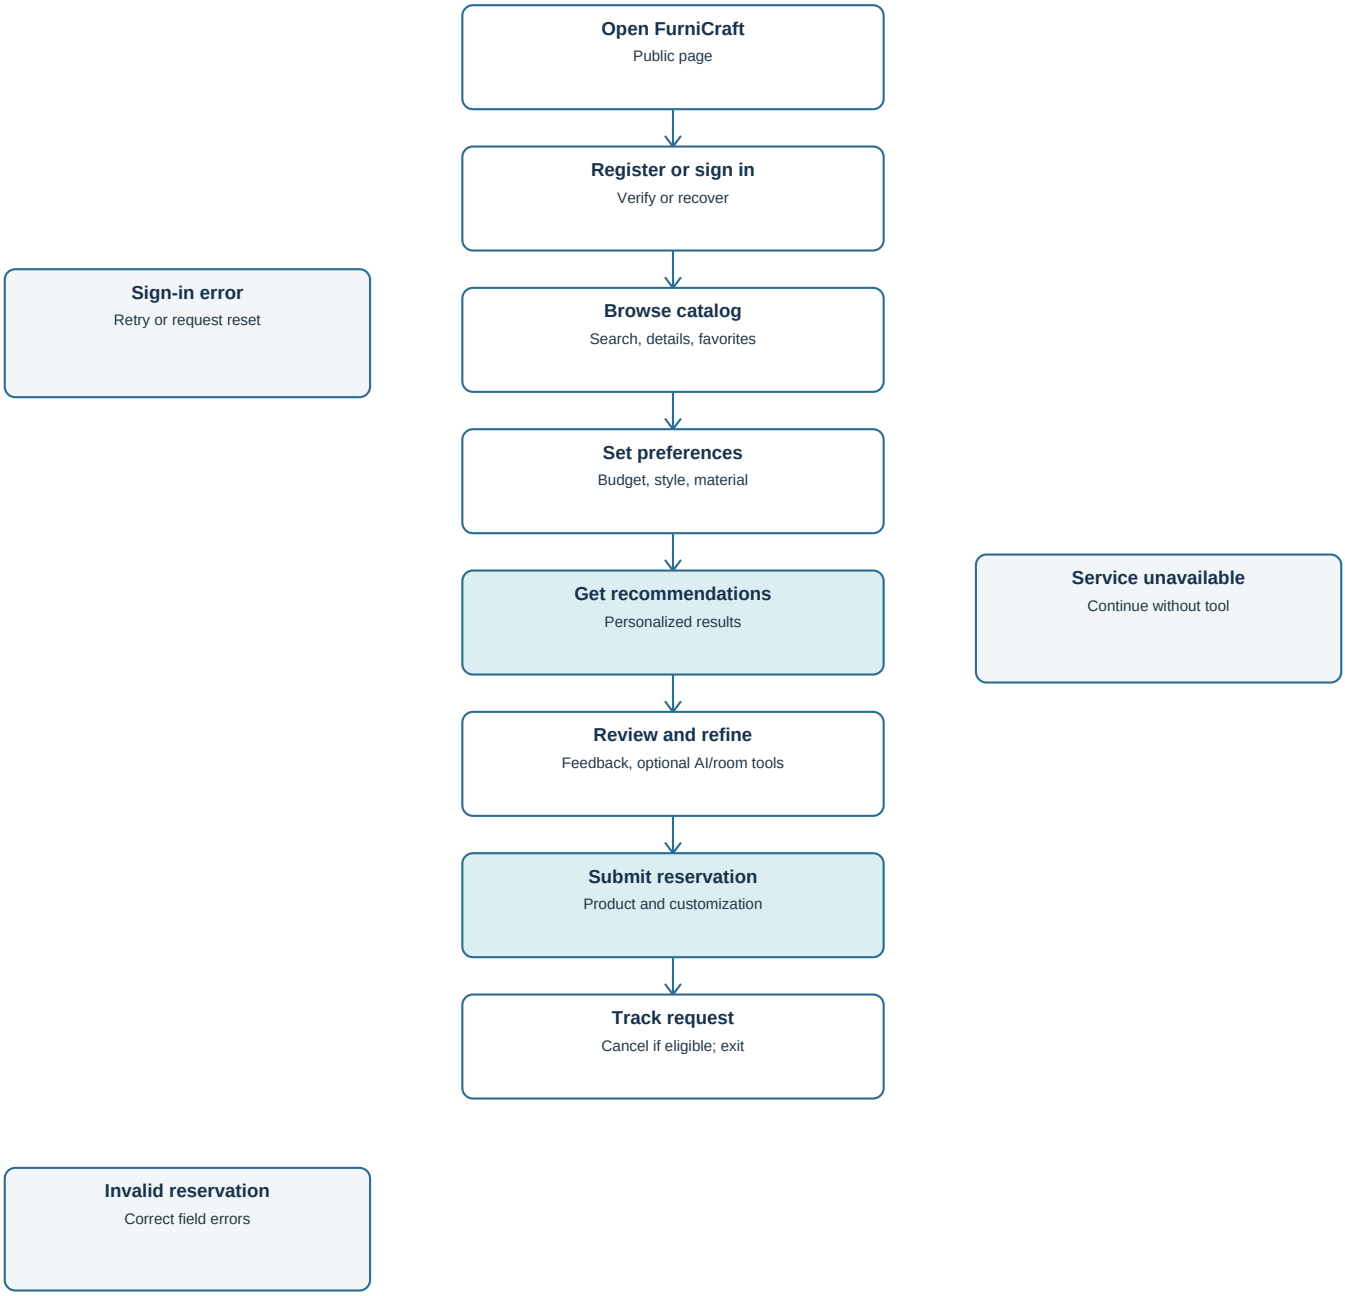


Application model names; main relationships shown without attributes or cardinalities.

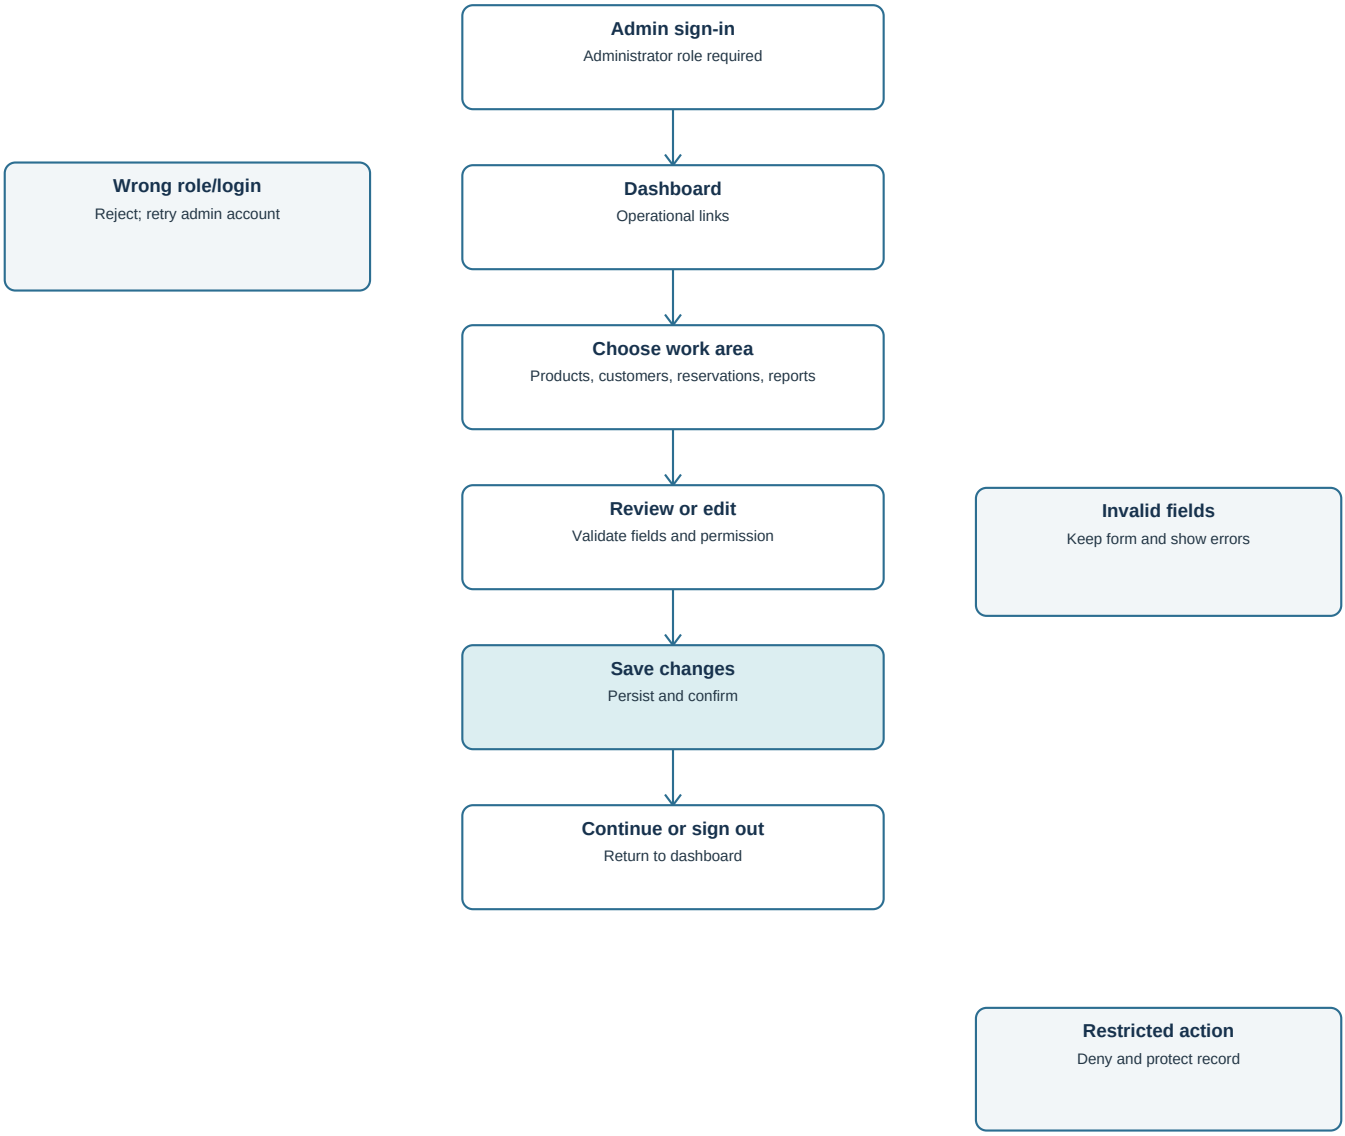
7 Flowchart for each user role

User role: Customer

Entry to outcome, including alternate and error paths.



7 Flowchart for each user role

User role: Administrator/Owner


Entry to outcome, including role checks and validation paths.
